

Hi I am Emily Severance of Boise I am speaking as a concerned citizen. I want ~~resist~~ ^{to} nuclear waste issues as well

I would like to draw attention to these points that are part of the Final Report of the Directors International Panel on the Decontaminating and Waste Treatment facility. From Lawrence Livermore National Laboratories, February 21, 1990.

This document seems to encourage DOE to make sparsely populated areas like Idaho bare the burden of the nuclear waste legacy. These comments seem to directly result in DOE's plan to built the Advanced Mixed Waste Treatment Facility in Idaho. It seems suspicious that Idaho only has 65,000 cubic meters of waste to treat and we are building a facility that is perpared to treat a total of 185,000 cubic meters of nuclear waste. From this document it seems that the Idaho DOE are not the only ones with plans to put Idaho on the map as a nuclear incinerator regional site. It seems that other people feel that Idaho fits the criteria as well.

The document states

- * that the DOE be encouraged to promote a public or commercial regional western waste treatment facility capable of handling mixed waste from DOE's western facilities and from other non DOE sources.
- * That arrangements should be made for commercial processing of the laboratories hazardous waste, and to
